5
6 </head>
7 <body>
8   <h1>Sign In</h1>
9   <form action="/sign-in-url" method="post">
10     <input type="text">
11     <input type="password">
12     <button>Login</button>
13   </form>
14
15 </body>
16 </html>
17
18 <!--
19 <form action="" method = ""></form> Will be a dummy form, because we need backend work in order
for it to work
20 "action" will specify where will we send the data
21 "method" will what type of http request to send
22 -->
23
24 <!--
25 <input type="" name=""> Create different types of input such as "Name", "Password", etc
26 But does not do drop-down menu
27 Example:
28 <input type="text" name=""> We will get a textbox
29 <input type="date" name=""> We will get date
30 <input type="file" name=""> We get a file picker
31 There are much more types
32 -->
33
34 <!--
35 <label></label>
36 -->
37
38
```
